

Purkeys' Reefer Enhancement Module Bulletin

All Purkeys Select™ Liftgate Charging systems come standard with the Reefer Enhancement Module and Harness, and are factory-set for the newer style Thermoking Precedent and Carrier Vector reefers. Reefer harness installation will vary based on reefer manufacture and model. Below are the various options and how to set the Reefer Enhancement module to properly function with the reefer:

Note: Reefer Enhancement Module is located in line with the Select Reefer harness near the Reefer starter.

Reefer Option 1: ThermoKing

Thermoking Precedent Reefer with one internal 30 amp charger and supplemental Power Package (accessory 65, 90 or 120 amp alternator). The 30 amp fuse must be placed in Position 1.

Reefer Option 2: Carrier

Carrier Vector Reefer with two internal chargers and no alternator. The 30 amp fuse must be placed in Position 1.

Reefer Option 3: Standard

Any Reefer with standard offering of a 65 amp alternator and no internal charger dedicated to charge the reefer battery. The 30 amp fuse must be placed in Position 2.
