

IMPROVE YOUR FLEET'S EFFICIENCY

TAPS™ Pure Sine

TRAILER AUXILIARY POWER SYSTEM

The TAPS uses power from either the dual pole or auxiliary batteries to provide 110 VAC power so that tools and equipment, such as electric pallet jacks, can charge while drivers are on their routes rather than having to return to the warehouse or unload by hand.

Featuring a pure sine output, the TAPS creates an easy solution for power needs in the back of the trailer.

Stainless steel housing protects inverter from the elements, allowing you to mount the TAPS anywhere you want—inside or outside the trailer!

KEY FEATURES

- Provides AC power in the trailer while DynaBalance™ technology protects truck batteries from over-discharge
- Uses a pure sine wave inverter, allowing it to work with any charging equipment or tools
- Indicates when AC power is available
- Includes plenty of surge power when devices first power on
- Protects from overload, short circuit, under voltage, and over voltage

ROI CALCULATOR

Assumptions	5 year ROI (\$)
Road call Frequency: 1 per year	\$3,912.13
Road call cost: \$800	
Payback Period	5 year ROI (%)
16.3 months	360%
